

**Private label
manufacturer**

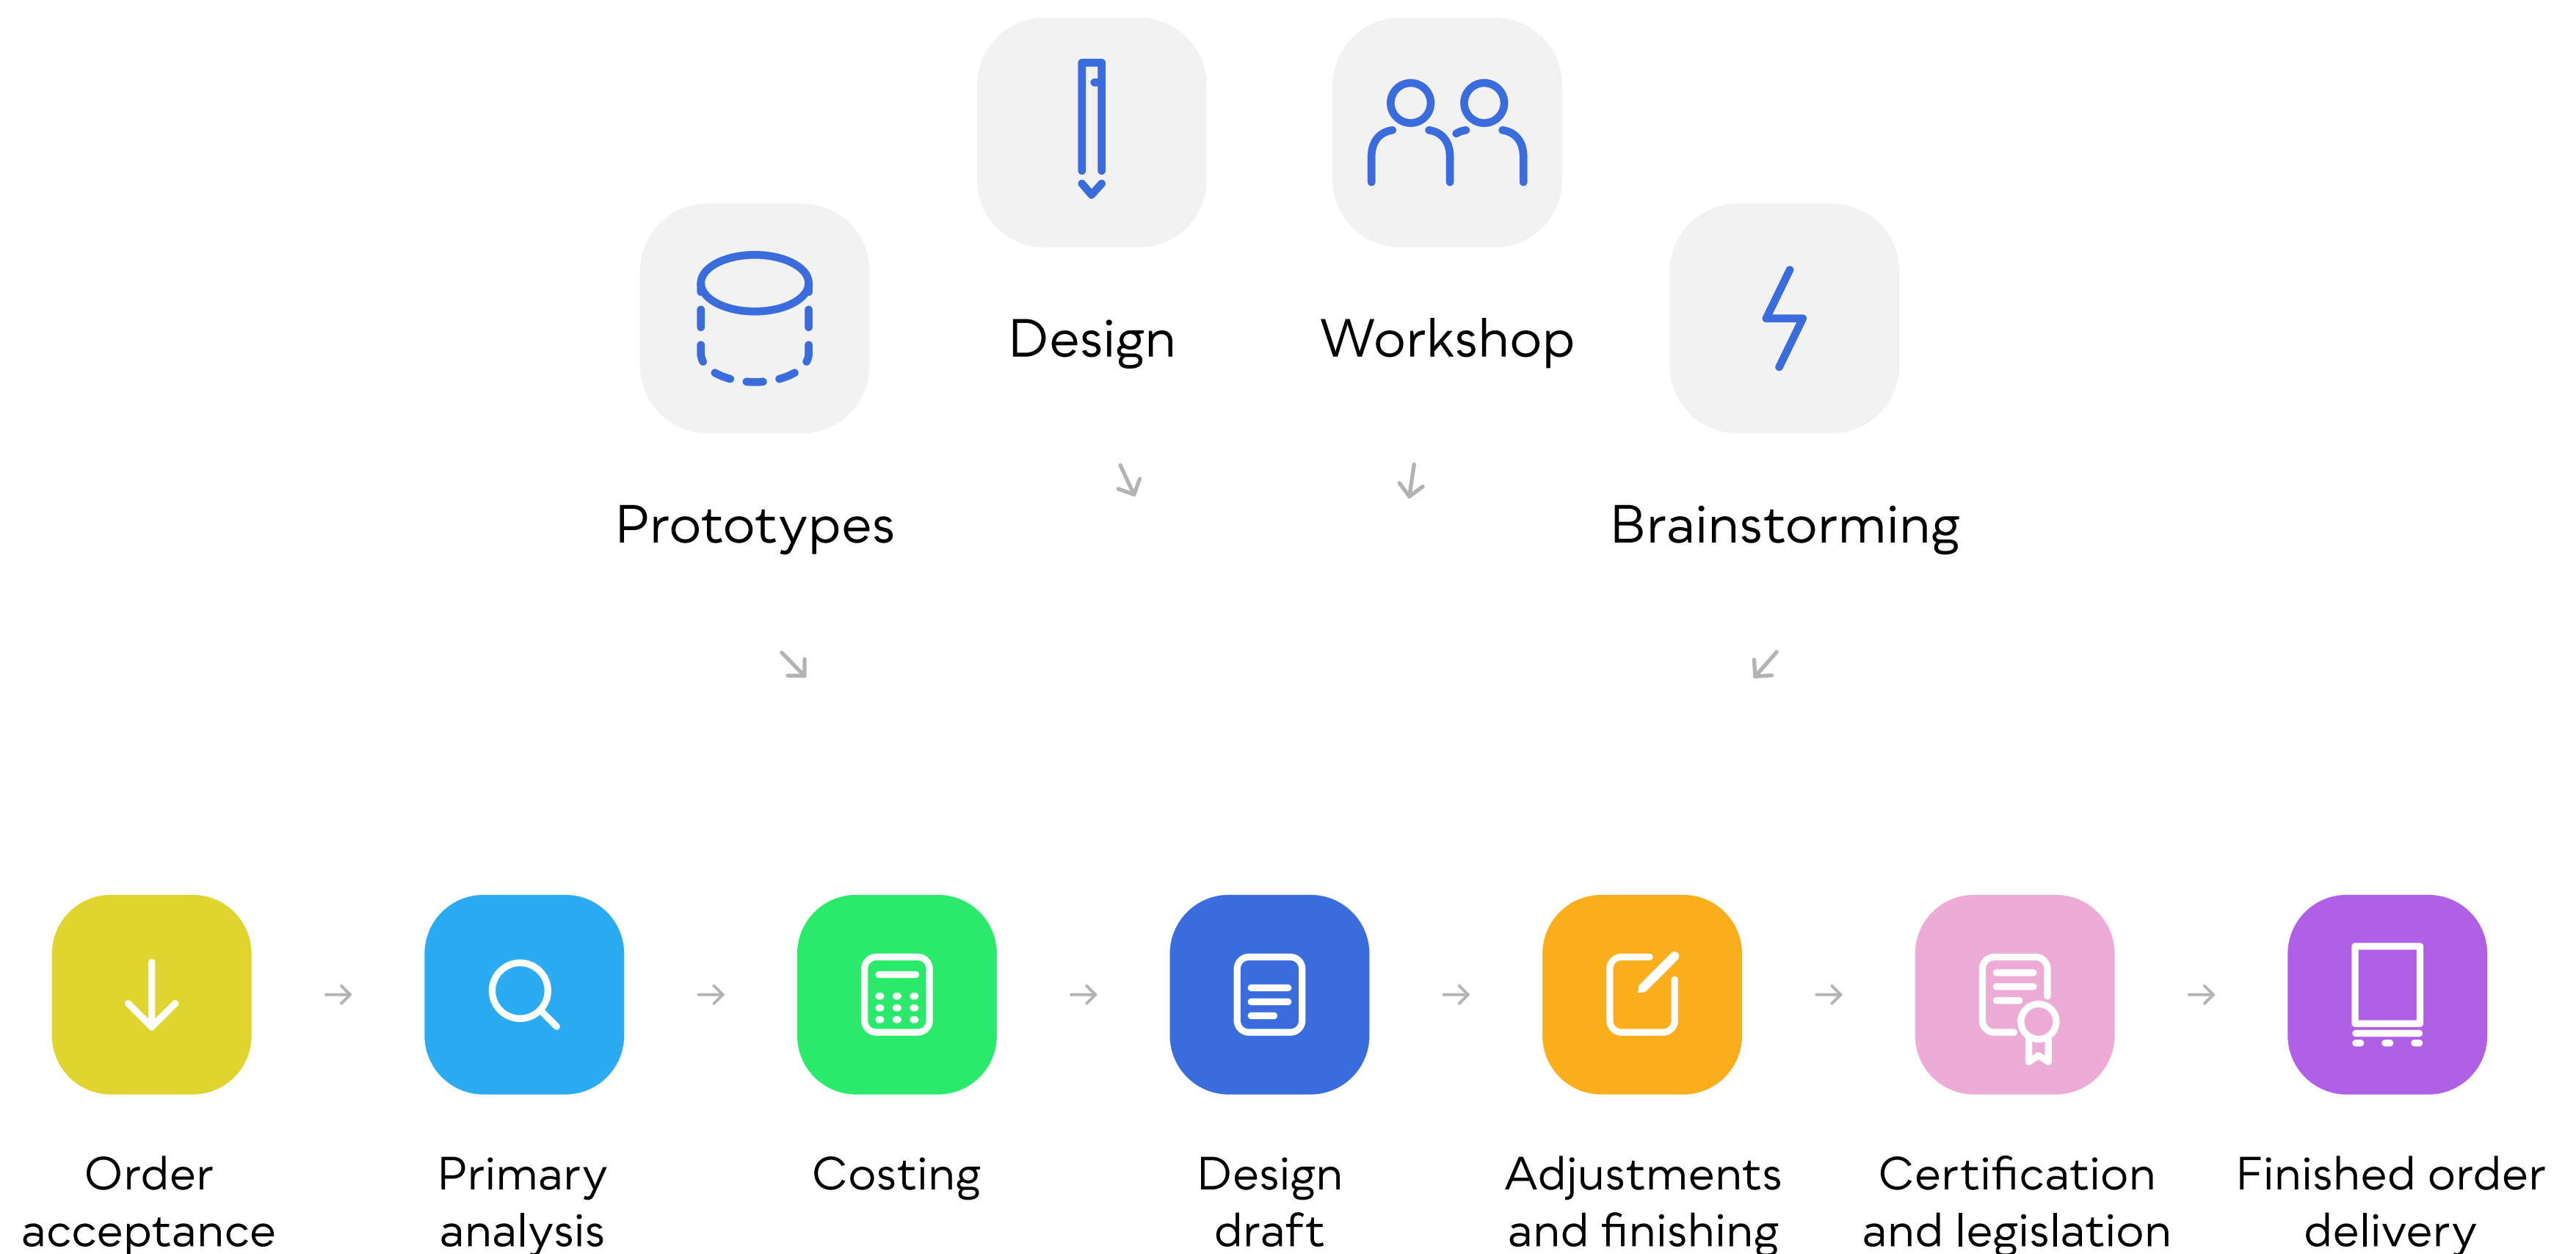

We develop and produce world-class chemical and cosmetic products for your business success

RETECH Production is a modern company, focused on manufacturing private label chemical and cosmetic products. Building on its own development and constant innovation, they have a large product portfolio prepared to be launched immediately on the market.

Our customers can enjoy an individual approach, modern technology and an efficient production process; our main goal is the production of a product tailored to their needs.

For RETECH Production,
Vojtěch Borovka

We will complete this together

We respond quickly and readily to customer needs. We offer product development from the simplest to the most complex. Finished products are delivered with certification, if required. The development process is carefully controlled from start to finish.

Future

We have passion for sustainability and innovation. We believe that our activities affect the environment and society in its entirety. So we try to run our business in an environmentally friendly manner to contribute to a sustainable future.

Cleaning agents

Household cleaning agents
Professional cleaning agents

Innovations to distinguish your products from the competition

The environment

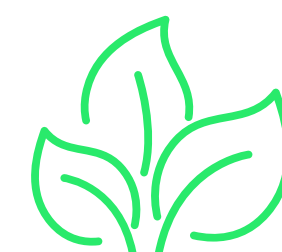

We undertake to minimise the negative impact of our chemical production on the environment. We are working to reduce emissions and waste through advanced technology and innovative processes. We monitor and comply with all strict environmental standards and regulations. Our manufacturing process is designed to minimise energy and water consumption.

to your business

Sustainability

We believe that sustainability is a key factor for our company's long-term success. Therefore, we focus on using renewable energy sources and reducing our carbon footprint. We are also involved in the research and development of new, environmentally friendly products and technologies. We work with our customers to find sustainable solutions and provide them with technical support during implementation.
